

CLAIM:

1. A tire sealant container (1) which is adapted to be fitted to a tire valve for injecting a sealant into a tire, said tire sealant container (1) comprising:
a container body (2) having a cap (3) screwably mounted on an open top end
5 thereof, said cap (3) having a hole (4) at a mid-portion thereof;
a dip tube (5) slidably received in said hole (4) and an annular flange (6) of dip tube (5) formed at a lower end thereof, said annular flange (6) abutting an inner surface of said container body (2) and serving as a stopper to prevent the dip tube (5) from being completely pulled out of said container body (2); and
10 a plug element (7) inserted in an open top end of said dip tube (5), said plug element (7) adapted to cover said dip tube (5), said plug element (7) being defined by a ledge (8), a serrated plug member (9) protruding from a bottom surface of said ledge (8).
