[30] Foreign Application Priority Data: NONE

[51] International Class: A21D13/00 (2006.01); A21D13/043 (2006.01)

[57] **ABSTRACT**

The utility model discloses a process for making cocoyam-coconut cookies using locally available ingredients in defined proportions. The method includes preparing and measuring the ingredients, softening the butter, mixing all-purpose flour, cocoyam flour, desiccated coconut, sugar, and baking powder, combining them with the softened butter to form dough, molding, and baking until done. The disclosed process facilitates the production of cookies utilizing underutilized agricultural materials, such as cocoyam and coconut, while maintaining standard cookie characteristics. The process is applicable for food product development in the bakery and food service industry, including as an added menu item in food establishments and as a shelf-stable product suitable for distribution in pasalubong centers. The utility model supports the value addition of indigenous crops for potential commercial applications.
